

Causality Assessment

1. Case Study Overview :

Patient: 45-year-old Female

Suspected Drug: Amoxicillin

Adverse Event: Skin Rashes

Onset: 3 days after drug initiation

Outcome: Recovered after drug withdrawal (Dechallenge)

2. Assessment using the Naranjo Algorithm :

Naranjo Question	Response	Score
1. Are there previous conclusive reports on this reaction?	Yes (Amoxicillin-induced rash is well documented)	+1
2. Did the adverse event appear after the suspected drug was administered?	Yes (Onset 3 days post-drug initiation)	+2
3. Did the adverse reaction improve when the drug was discontinued?	Yes (Patient recovered after stopping)	+1
4. Did the adverse reaction reappear when the drug was readministered?	Do Not Know / Not Done	0
5. Are there alternative causes that could on their own have caused the reaction?	No (No other concomitant medications/diseases noted)	+2
6. Did the reaction reappear when a placebo was given?	Do Not Know	0
7. Was the drug detected in blood/fluids in toxic concentrations?	Do Not Know	0
8. Was the reaction more severe when the dose was increased/less severe when decreased?	Do Not Know	0
9. Did the patient have a similar reaction to the same or similar drugs in any previous exposure?	Do Not Know	0
10. Was the adverse event confirmed by any objective evidence?	Yes (Clinical observation of skin rash)	+1

Total Naranjo Score: 7

Naranjo Scale Interpretation: Probable (Score range 5-8)

3. Assessment using the WHO-UMC System :

Temporal Relationship: Plausible time sequence (3 days onset after drug administration).

Dechallenge: Positive (resolution/recovery observed following discontinuation).

Alternative Causes: Unlikely/None reported.

Rechallenge: Not performed.

4. Final Causality Verdict :

Classification: Probable

The event follows a reasonable temporal sequence after starting Amoxicillin, corresponds to a known reaction pattern for the drug, and shows a positive dechallenge (recovery upon stopping). Because a rechallenge test was not conducted, it cannot be classified as Certain, so Probable the correct causal assignment.
