

Severity & Case Classification

1. Seriousness Criteria (ICH E2A):

Serious: Any adverse event that results in death, life-threatening condition, inpatient hospitalization (or prolongation of existing hospitalization), persistent or significant disability/incapacity, congenital anomaly/birth defect, or another medically important condition.

Non-Serious: Any reaction that does not meet the criteria for a serious adverse event.

2. Expectedness Criteria:

Expected: The reaction is documented and consistent with the reference safety information.

Unexpected: The nature, severity, outcome, or frequency of the reaction is not listed in the standard product label.

Case Classification Table :

Case	Drug	Adverse Reaction	Seriousness	Expectedness	Justification
1	Amoxicillin	Skin rash, itching	Non-serious	Expected	Does not require hospitalization or pose a life threat; mild cutaneous allergic reactions are standard listed adverse effects for Amoxicillin.
2	Ibuprofen	Gastrointestinal bleeding requiring hospitalization	Serious	Expected	Meets serious criteria due to hospitalization; GI ulceration and bleeding are well-established risks documented on standard NSAID labels.
3	Metformin	Lactic acidosis	Serious	Expected	Lactic acidosis is a severe, life-threatening metabolic emergency (medically important event); it is a known, documented risk listed as a boxed warning for Metformin.
